

Amendments to the Specification:

Please amend the paragraph (section) beginning on page 2, at line 5 as shown below:

The air duct may include an outlet opening that receives pressurized air from the duct portion. A third seal may be disposed proximate the outlet opening to inhibit air leakage at the outlet opening. The third seal may be integrally connected to and formed with the first and second seals. The ~~second~~ first and third seals may have a similar configuration and may be connected by the ~~first~~ second seal.

Please amend the paragraph (section) beginning on page 6, at line 1 as shown below:

The duct portion 50 may have any suitable configuration that permits an adequate volume of air flow. In the embodiment shown in Figure 2, the duct portion 50 has a semi-circular cross-section. However, the duct portion 50 may have any suitable cross section or combination of cross section configurations. In addition, multiple ~~conduits~~ conduit branches may be incorporated. For example, a first conduit branch may be used to route air to a window demister vent and a second conduit branch may be used to route air to the exhaust duct or a vent register. Optionally, an individual conduit may be divided into multiple chambers.
